In Tutorial 20: The Rectangular Coordinate System, we went over the basics of the rectangular coordinate system. In this tutorial we will be adding on to this by looking at graphing linear equations by plotting points that are solutions. Basically, when you graph, you plot solutions and connect the dots to get your graph.

Step 2: Determine which side of the line contains the solutions. Since y is less than the expression, you will shade below the line. If you are unsure of which side to shade, pick any point on the graph (that's not on the line). You are choosing a test point to determine which side contains the solutions.

In mathematics, an inequality is a relation that holds between two values when they are different (see also: equality).. The notation $a \neq b$ means that a is not equal to b .; It does not say that one is greater than the other, or even that they can be compared in size. If the values in question are elements of an ordered set, such as the integers or the real numbers, they can be compared in size.
