Fig. 2a shows a typical schematic representation of an airport's Operational Throughput Envelopes that can be computed through either one of the two approaches summarized above. By definition, this representation captures the variations in airport capacity as a function of the mix of arrivals and departures. Several Operational Throughput Envelopes can be computed to reflect the differences ...

Fusion power is a proposed form of power generation that would generate electricity by using heat from nuclear fusion reactions. In a fusion process, two lighter atomic nuclei combine to form a heavier nucleus, while releasing energy. Devices designed to harness this energy are known as fusion reactors.. Fusion processes require fuel and a confined environment with sufficient temperature ...

A molten salt reactor (MSR) is a class of nuclear fission reactor in which the primary nuclear reactor coolant and/or the fuel is a molten salt mixture. MSRs offer multiple advantages over conventional nuclear power plants, although for historical reasons, they have not been deployed. The concept was first established in the 1950s.
