For record keeping and other purposes, a hospital must list the care and services it rendered to a patient. This might include information such as medicine that was given to the patient, ultrasound or similar tests that were performed, and the conclusion of the tests. Most discharge forms are pretty specific about what services were rendered.

An electric arc, or arc discharge, is an electrical breakdown of a gas that produces a prolonged electrical discharge. The current through a normally nonconductive medium such as air produces a plasma; the plasma may produce visible light. An arc discharge is characterized by a lower voltage than a glow discharge and relies on thermionic emission of electrons from the electrodes supporting the arc.
